Pandas Lab n°3

Apply

Step 1. What is the type of the columns?

Step 2. Create from "created_datetime" the two following columns:

    "created_date": containing the date in the format "%Y-%m-%d"

    "created_time": containing the time in the format "%h:%m:%s"

Step 3. Delete the "created _datetime" column

Step 4. Convert the "created _date" column type to datetime64.

Step 5. Errors sometimes happens when converting columns types. How did you manage to deal with them ? How many rows were affected ?

Step 6. Drop the rows that does not have a datetime64 "created_date" value
